Our company specializes in delivering cutting-edge software solutions for loan management. We streamline the lending process for financial institutions, enabling them to efficiently handle loan applications, approvals, repayments, and credit history tracking.
My Role As a software engineer, I played a key role in developing both the frontend and backend of our loan management platform. Using React for the frontend, I crafted intuitive user interfaces that offer a smooth and responsive user experience. On the backend, I utilized .NET to design and implement robust APIs and services.

Work Experiences

Software Engineer
- Maintained version control systems such as GIT and SVN for source code management purposes.
- Developed applications and dashboards for both internal and external web pages.
- Implemented object-oriented programming concepts, such as inheritance and polymorphism in java.
- Documented software development processes and procedures.
- Integrated third-party payment gateway APIs into existing eCommerce systems.
